Oil based Paints and Solvents are 'Hazardous Wastes' and as such are subject to much stricter regulations for storage and disposal than ordinary products / waste.

We must ensure that the following rules are followed:

- Paints and Solvents are to be stored in approved containers and areas on drip trays or banded pallets
- Containers are to be kept closed when not in use
- When transporting paints or solvents ensure the containers are closed.
- Ensure incompatible chemical products (those which may cause a hazardous reaction if they come in contact) are not stored together.
- Smoking is prohibited in flammable liquid storage areas.
- Flammable liquids are not to be stored near sources of ignition (sparks, electricity, flames or hot objects)
- When containers are empty they must be disposed of correctly, by a hazardous waste licensed carrier.
- All paints and solvent tins/containers should be clearly marked.

The glove material has to be impermeable and resistant to the product/ the substance/ the preparation.

Due to missing tests no recommendation to the glove material can be given for the product/ the preparation/ the chemical mixture.

Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation

· **Material of gloves**

The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.

· **Penetration time of glove material**

The exact break through time has to be found out by the manufacturer of the protective gloves and has to be observed.

· **Eye protection:** Goggles recommended during refilling
